This is a sad loss for me. I read Bill's article in a recent ER. When I discovered that he lived in Menlo Park, just a few miles from my QTH, I began to plan a visit with him. I should have acted sooner...

Hello gang,

Thanks for all the good suggestions I recieved!

I think I may have found a product that will work. I went to a sign shop where they make neon signs. They use some high ac voltages to excite the neon lights and so they need various types of high voltage wire. I settled on a wire made by a company called "Paige". The wire was 14 AWG (like the original Desk) and is rated at 15,000 volts max. It is black and fairly flexible. The dispenser box said "Tuf-hide noodleflex, GT0-15 14 AWG 105C BLK" The Pige part# is 981298.

They also had a gray sleeve that could be installed over the wire that he called "corona gaurd" or something like that. It is apparently used where the wiring is in tight quarters or when there is a problem with leakage.

Hope this helps. I am anxious to try it.

Thanks again for the tips,

Joe Eide - KB9R

The 'wedge shaped' deal was actually a PS / speaker for the receiver only. I don't really understand this idea: there was no similar tilted base for the transmitter, and it seems like you might want to run both this way. Also it would seem that more of these sold as trans-rec sets than single receivers for the hamshack.

I recently purchased a large set of QSTs as part of my effort to put together a complete set.

As a result, I have the following years (complete except as noted) available due to duplication with years I already had.

Condition is good, but they are not mint.

Here what I have so far (will continue to update as I open boxes and see if I have others). All prices are plus shipping:

These are \$ 15 per year:

1932  
1933  
1934  
1935  
1936  
1937  
1938  
1939

1946  
1948  
1949  
1950  
1951  
1952  
1953  
1954  
1955  
1956

These are \$ 20 per year:

1941  
1942 (missing Jan)  
1943  
1944 (missing Nov & Dec)  
1945

Something else that should work for HV is spark plug wire. Hot-rod shops carry the type with stranded copper conductor.

To: Old Tube Radios <boatanchors@theporch.com>  
Subject: Old meets New

New: "Machine age" (post deco - Buck Rogers era) lamp that's 3 "touch speeds."

Old: a TCS

When Old is keyed on 40m, New successively goes through it's "speeds." Actually wud be a nice hamfest exhibit. But it drives mere mortals nuts & the fix is obvious - loosen bulbs.

Say ya know New is a techno triumph. Look inside there's a chip that appears to be a osc., discriminator, & 2-bit counter. The osc. is pulled by touch & the discriminator sees it & bumps the counter that selects one of 4 states brioghtness "speeds"). A Triac seems to be set for a fourth cycle, half-cycle, & full cycle pass-thru to blubs.

Ingenious and these things cost around \$10. Really throwaway if a transient hits one - & thats just how I saw the insides.

Imagine if Rockwell made 'em. You just gotta admire the price & idea.

Now the TCS. Have used it fb in AWA OT 'test, day 1. Gawd are the

relay-clacking deals smoothe runners. The pre-war Collins 18Q. This  
a TCS-13 by Hamilton - still wonder if it was the kitchen mixer co.  
(Hamilton-Beech)

Told a kid that they were used on PT boats & tugs & the response came  
back "Tug-boat Annie, eh?"

Tug-boat Annie the TCS.

Frontier Capacitor has them for \$0.15 each. They also have metal poly,  
orange drop, and electrolytic and will re-build your metal can electrolytic.  
I'm a very satisfied customer.

They can be reached at 701--378-2341.

Old: a TCS

When Old is keyed on 40m, New successively goes through it's "speeds."  
Actually wud be a nice hamfest exhibit. But it drives mere mortals  
nuts & the fix is obvious - loosen bulbs.

When I first moved to Raleigh, and was operating my Ranger into  
the gutter system of my apartment, I noted that I neatly modulated  
my neighbors touch lamp. I always wondered if he considered it demonic posession.

Made for a nice keying monitor at night, as it lit up the curtains  
behind my rig.

John

Hmmm! TCS? Yup!  
It sings a song when you are sending "v's"!

Clickity-clack.....clickety-clack.....clickety-clack!  
Relays noisy, key contacts spark! What a marvel.  
How does something so small weigh so much?  
I wonder if John Wayne knew how to operate one?

Many old Navy hands remember them on larger ships.  
"We used them for harbor radio watch" is the reply  
you usually get from old hands that actually used  
them on Navy ships.

How long in the future will the venerable 1625's heaters still light? Surely this 12 volt child of the 807 and 6L6, will be here for as long as vacuum tubes will survive?

To my recollection as a boy in the 40's and 50's, seems like there were more 1625's than all the 807's and 6L6's combined! Thousands of SCR-274N and ARC-5 transmitters! EVERY ham I ever knew then had at least one or two of them! Even if they just resided on a shelf in the garage.

This was my quest then: to beg or buy cheap that unused piece of "command set" gear just wasting away on its owner's garage shelf!

I remember the big "sales" that Allied Radio and Burnstein-Applebee had on 1625's! In one instance, 100 NEW surplus 1625's for the princely sum of 15 cents each! A 'price break' from the usual price of 25 cents each! I went wild. The "REA Express" charges were almost as much as the tubes! BUT...I had 100 of them! A lifetime supply for slightly less than \$25 shipped! I was "tube rich"! I'll bet I gave away at least half of them. How was I EVER going to use that many 1625's?

Now...over 50 years later, I have 1625's, a "command" transmitter junker and a working TCS! Do times really change that much?

My wife bought one of those, it made radio reception very miserable and to my great joy it died one day as you later document. My wife brought this up at the store she bought it at and they replied that touch lamps are junk and they don't carry them any more. I tore open my wife's touch lamp and saw the blackened module and smelled the burnt phenolic and replaced the module with a switch.

My wife and I are both happy now.

Subject: Hammarlund replacement clock - updated info?

Content-Type: text/plain; charset="us-ascii" ; format="flowed"

Hi.

Today I phoned Lynn, N0AL0 of Radio Restorations who took over the BA paint line from R&R Designs and asked him if he now carries the Hammarlund replacement clocks. He said no, not yet, but he plans to. He said that in the meantime the clocks (but not the lenses) are still available from Roberta Hummel at R&R's old address in Marshall, WI. To try to verify this, I called the old R&R phone number and got a recorded message referring me to a new number. Calling that number, I received a message saying it is disconnected. I don't know of an email address for Roberta Hummel, so I still can't verify 100% that the clocks are still available or at what price. Does anyone have any further information? I know there are at least a few people out there still looking for the replacement clocks. TIA.

73,  
Joe K9LY

Joe,

I can't post to boatanchors from here, but, send this on if you think=it will help the guys.

Roberta Hummel is still selling items; but she is only doing it by snailmail. Go to this months (or any months in the last year) to the=Want Ads. She is selling HW-101 rubber drive belts, 2@ for \$5. I just go=t some=66rom her, so I know she is still somewhat in business.

Thanks,

Wayne Harrah, ke=D8ms

I remember Harvey Brain, VQ9HB (see picture of his boat in a 1963 CQ). He operated from several islands in the Indian ocean using the TCS 2 to 16 mcs system (RX and TX). He operated CW (distinctive tone 8 could not be missed on the long path on 20). I got him to go to AM phone at two spots. On phone the TCS jumped freq on occasion. Being Collins made gear the jumps were precisely 20 kcs down and a few minutes later back. You had to stay on your toes as you worked Harvey.

A wonderful old black steel chassis with several good sized blocks of Thordason iron on it and already punched tube socket and switch holes followed me home from a local surplus outlet. Now the problem:

Does anyone have the specifications for:

Thordason Transformer Type T 17R30

Thordason Choke Type T 67C49

Thanks & 73

Mac

Hi Folks,

While surfing the Web, I found a page with an updated list of Army-Navy Equipment Code Designations:

<http://www.milspec.ca/radcodes/ancodes.html>

The rest of the web page may be of interest to others:

<http://www.milspec.ca/>

"Touch lamps" are the bane of any ham or SWL!  
They generate very severe RFI whether off or on!  
The tiniest bit of RF in the power line will make them  
activate when not "touched"!  
Happily, they seem to be losing favor!  
It would be my wish that the designer of this awful  
piece of engineering, should have tender parts of his anatomy  
removed by very dull razor blades!  
My "two cents" worth on "touch lamps"! YUK!
